

KITCHEN/FAMILY ROOM PROJECT

The design of the space takes inspiration from the playful kid's world. As the client has three children, the aim of the project has been to create a comfortable and cozy environment for the family by designing the spaces with special attention to kids, to their needs and perceptions.

As the project involves the family room open to the kitchen and the the next sitting room, the brief has been to find a leit motif common to all these spaces with a particular attention to the running of one room into the other. Both the rooms create a joyful and relaxing mood at same time, by balancing soft and mute colors with brighter accent, elementary essential shapes with more sinuous ones, material with a particular texture or grain with flatter and plainer ones, matt and glossy finishes. Particular attention is given to fabrics which are linen and cotton, natural and hypoallergenic for kids.

Predominant in the colour palette are yellow, lime green, cream, white matched with the soft and warm tone of the oak wood.
